CARGO SECURING OPEN VEHICLE - VDI 2700 ®

Introduction

Exceptional transports or exceptional transport applies to loads that exceed the normal legally permitted dimensions and weights for a "normal " transport.

Within this sector, Nooteboom Trailers b.v. is a leader in innovating and building appropriate, high-quality solutions for the transport of any kind of exceptional cargo.

Transporting special loads with our advanced equipment requires a certain degree of expertise and knowledge of the equipment, all the different regulations and, of course, a different driving style when participating in traffic.

The driver in open or exceptional transport must have great expertise and professional knowledge and always pay extra attention to loading, bracing, anchoring and blocking the loads. He must also take into account all possible requirements of manufacturers, machine owners, inspection services and, of course, the vehicle and lashing materials.

Cargo securing is important so that the cargo does not slide or roll and can be transported safely and damage-free.

In addition to Load Securing, proper loading of the vehicle is of great importance, and therefore extra attention is paid to this. Consider, for example, position of the load on the vehicle, load capacity and load support.

Target group and admission requirements

- Drivers and persons working in exceptional and/or open transportation.
- Students must not have impairments of vision, hearing functions and motor skills.

Training content

The training consists of a theory and a practical part.

Theory

During the theory section, topics covered include:

- Legal provisions and regulations consequences of not loading properly
- European guidelines
- Responsibilities of the parties
- Forces at play when transporting exceptional cargo
- Methods and principles of cargo securing

Practice

The practical part consists of:

- Apply legal provisions and regulations
- Bracing and binding of units, machines, scissor lifts, telescopic boom lifts, forklifts and or customer specific loads, among others
- Use of straps, chains, blocks and friction material
- Use of simple tables to determine how loads should be secured

Exam

Upon completion an exam will be administered, participants will receive a certificate and occupational competence pass in accordance with the Working Conditions Act which has a validity of 5 years.
